Making the right choice

OUTDOOR TABLES

The materials used to manufacture our outdoor tables are weather resistant (sun, rain, snow, frost) and therefore can safely be left outside without any risk of deterioration. Moreover, they are longer lasting and the top models still provide a very high quality game.

INDOOR TABLES

The material used to manufacture our indoor tables are not weather resistant but do provide an excellent bounce, are very stable and are good value for money. This type of tables is also used in competition.

Frames

Framing increases the rigidity and the flatness of the board. Its effectiveness is relative to the material used and its thickness.

Panels

The bounce quality varies according to the panel. The thicker, the denser, and/or the harder the board, the higher and more uniform the bounce will be, as there is a direct relationship between the thickness/density/hardness of the board and the quality of the bounce.

Chipboard : thickness 16 to 25mm, medium density/medium hardness.

Resin laminate : thickness 4 to 7mm, very high density/very hard.

Coating

The **MAT**® and **TOP**® coatings will give you a better quality of play, especially when it comes to ball bounce and adherence. Available for certain models. Exclusive to Cornilleau. (see p. 14, 18-23)

Leg assembly

Determines the stability of the table, therefore the broader the legs the more stable the table will be.

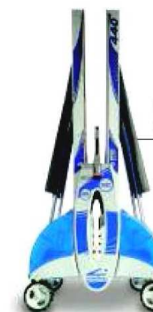

Wheels

They allow you to move the table; must stand up to resistance and have a large diameter in order to roll easily.

Net and posts set

Posts are made of either steel or ABS, with some having adjustments for the height and tension of the net. The **COMPACT**® TECHNOLOGY is always supplied with a permanently mounted net and posts set.

COMPACT®
TECHNOLOGY

Folding system

Designed to handle the table safely and with ease, at the same time minimising the storage space.

Locking Mechanisms

Safety is a priority and a table must not open or fold unexpectedly. The Cornilleau **COMPACT**® together with the highly reliable exclusive **DSI**® locking mechanism ensures the table is safe (see details page 5).
